EDUCATION AND TRAINING

05/07/2012–06/07/2017

Postgraduate Specialisation in Radiodiagnosis (108/110)

University of Padua, Padua (Italy)

Intracranial arterial wall behaviour to subarachnoid bleeding detected by 2D Black-Blood T1w MRI.

Introduction: subarachnoid hemorrhage (SAH) in Italy has an average incidence of 6 per 100,000 individuals each year. The most challenging complication is cerebral vasospasm (CV) that occurs in about 15% of cases. The use of Black-Blood MRI technique has become a very useful tool for the neuroradiological study of intracranial arterial walls in several brain disorders, such as vasculitis, aneurysms, dissections and atheromatous plaques. Few studies investigate arterial walls behavior after SAH and possible relation with CV.

01/10/2005–20/07/2011

Degree in Medicine and Surgery (110/110)

University of Padua, Padua (Italy)

Dimensional assessment of pediatric sarcomas

Introduction: soft tissue sarcomas (STM) are 6% of all pediatric cancers. The reduction in tumor volume post-treatment is a significant predictor of survival. CT and MRI are used to ascertain the anatomical dimensions of a tumor, but is not yet clear whether this should be expressed as 1, 2 or 3 sizes. After induction chemotherapy, various attempts have been made to objectively measure tumor response and establish a standard definition of tumor size.
